
Section 1

Population

This section presents statistics on the growth, distribution, and characteristics of the U.S. population. The principal source of these data is the U.S. Census Bureau, which conducts a decennial census of population, a monthly population survey, a program of population estimates and projections, and a number of other periodic surveys.

Decennial censuses—The U.S. Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of members of the House of Representatives among the states. For over a century after the first census in 1790, the census organization was a temporary one, created only for each decennial census. In 1902, the Census Bureau was established as a permanent federal agency, responsible for enumerating the population and also for compiling statistics on other population and housing characteristics. Data in this 2022 Edition of the *Statistical Abstract of the United States* do not include results of the 2020 Census as they had not been fully released or incorporated into population estimates at the time of publication.

Historically, the enumeration of the population has been a complete (100 percent) count. That is, an attempt is made to account for every person, for each person's residence, and for other characteristics (sex, age, family relationships, etc.). In the twentieth century, the questions were divided between a "short" and "long" form. Only a subset of the population was required to answer the long-form questions. Starting in 2000, the census consisted only of a short form, which included basic questions about age, sex, race, Hispanic origin, household relationship, and owner/renter status. After the 2000 Census, the long form became the American Community Survey (ACS) and continues to collect long-form-type information. The ACS includes not only the basic short-form questions, but also detailed questions about population and housing characteristics. It is a nationwide, continuous sample survey designed to provide communities with reliable and timely demographic, housing, social, and economic data every year. Since its start, the ACS has been providing a continuous stream of updated information for states and local areas. Sample data may be used with confidence where large numbers are involved and assumed to indicate trends and relationships where small numbers are involved.

Current Population Survey (CPS)—The CPS sample is a probability sample designed primarily to produce national and state estimates of labor force characteristics of the civilian non-institutional population 16 years of age and older. The sample consists of independent samples in each state and the District of Columbia, and each state sample is specifically tailored to the demographic and labor market conditions that prevail in that particular state. About 60,000 housing units are required in order to meet the national and State reliability criteria, drawn from 824 sample areas.

The CPS also serves as a vehicle for inquiries on other subjects. Using CPS data, the Census Bureau issues a series of publications under the general title of *Current Population Reports*.

Estimates of population characteristics based on the CPS will not agree with the counts from the census because the CPS and the census use different procedures for collecting and processing the data for racial groups, the Hispanic population, and other topics. Caution should also be used when comparing estimates for various years because of the periodic introduction of changes into the CPS. Beginning in January 1994, a number of changes were introduced into the CPS that affect all data comparisons with prior years. These changes included the results of a major redesign of the survey questionnaire and collection methodology and the introduction of 1990 census population controls, adjusted for the estimated undercount. Beginning with the 2001 CPS Annual Demographic Supplement, the independent estimates used as control totals for the CPS are based on civilian population benchmarks consistent with Census 2000. In 2003 the name of the March supplement was changed to Annual Social and Economic Supplement (ASEC). Beginning with the 2012 March CPS supplement, the estimates are based on Census 2010 population controls. These changes in population controls had relatively little impact on derived measures such as means, medians, and percent distribution, but did have a significant impact on levels.

In 2002, the ASEC incorporated a significant sample expansion. The sample was expanded primarily to improve state estimates of children's health insurance coverage (CHIP). This sample increase of 19,000 households added to the regular sample of 72,500 households and the Hispanic sample of 6,500 gives a total sample size of about 98,000 households. The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were selected to receive the improved set of health insurance coverage items. The improved income questions were implemented using a split panel design. Approximately 68,000 addresses were selected to receive a set of income questions similar to those used in the 2013 CPS ASEC. The remaining 30,000 addresses were selected to receive the redesigned income questions.

Population estimates and projections—Each year, the United States Census Bureau produces and publishes estimates of the population for the nation, states, counties, state/county equivalents, and Puerto Rico. With each annual release of population estimates, the Population Estimates Program revises and updates the entire time series of estimates from April 1, 2010 to July 1 of the current year, which is referred to as the vintage year. "Vintage" denotes an entire time series created with a consistent population starting point and methodology. The release of a new vintage of estimates supersedes any previous series and incorporates the most up-to-date input data and methodological improvements. Estimates for 2010-2020 are based on the 2010 Census and were created without incorporation or consideration of the 2020 Census results.

Estimates of the United States population are derived by updating the resident population enumerated in Census 2010 with information on the components of

population change: births, deaths, and net international migration. The population estimates base reflects changes to the decennial census population due to the Count Question Resolution program, geographic program revisions, and modifications to the 2010 Census race categories for consistency with the race categories in input data.

Registered births and deaths are estimated from data supplied by the National Center for Health Statistics and the Federal-State Cooperative for Population Estimates (FSCPE). The net international migration component consists of four parts: (1) the net international migration of the foreign born, (2) the net migration of natives to and from the United States, (3) the net migration between the United States and Puerto Rico, and (4) the net overseas movement of the Armed Forces population. Data from the ACS are used to estimate the annual net migration of the foreign-born population. The estimated net migration of the native-born population is produced using the foreign-census method which utilized data from over 80 countries. This work compares estimates of the United States born or United States citizen population living overseas measured by population registers and censuses in other countries at two consecutive time periods. The residual was used to develop estimates of net native migration. Estimates for net migration between Puerto Rico and the U.S. are derived from the ACS and the Puerto Rico Community Survey. Estimates of the net overseas movement of the Armed Forces are derived from data collected by the Defense Manpower Data Center.

Estimates for state and county areas are based on the same components of change data and sources as the national estimates with the addition of net internal migration. Estimates of net internal migration are derived from federal income tax returns from the Internal Revenue Service; group quarters data from the branches of the military, the Department of Veterans Affairs, and the FSCPE; and Medicare data from the Centers for Medicare and Medicaid Services.

Population estimates and projections are available on the Census Bureau Web site, see <www.census.gov>. These estimates and projections are consistent with official decennial census figures with no adjustment for estimated net census coverage. For details on methodology, see "Methodology for the United States Population Estimates: Vintage 2020," <www.census.gov/programs-surveys/popest/technical-documentation/methodology.html>.

Immigration—Immigration (migration to a country) is one component of international migration; the other component is emigration (migration *from* a country). In its simplest form, international migration is defined as any movement across a national border. In the United States, federal statistics on international migration are produced primarily by the U.S. Census Bureau and the Office of Immigration Statistics of the U.S. Department of Homeland Security (DHS).

The Census Bureau collects data used to estimate international migration through its decennial censuses and numerous surveys of the U.S. population.

The Office of Immigration Statistics publishes immigration data in annual flow reports and the *Yearbook of Immigration Statistics*. Data for these publications are collected from several administrative data sources including the DS-230 *Application for Immigrant Visa and Alien Registration*, the DS-260

Electronic Application for Immigrant Visa and Alien Registration of the U.S. Department of State (used by applicants living abroad), and the I-485 *Application to Register Permanent Residence or Adjust Status* of U.S. Citizenship and Immigration Services (USCIS) for applicants living in the United States.

An immigrant, or lawful permanent resident (LPR), is a foreign national who has been granted lawful permanent residence in the United States. New arrivals are foreign nationals living abroad who apply for an immigrant visa at a consular office of the Department of State, while individuals adjusting status are already living in the United States and file an application for adjustment of status to lawful permanent residence with USCIS. Individuals adjusting status include refugees, asylees, and various classes of nonimmigrants. A refugee is a person outside his or her country of nationality who is unable or unwilling to return to his or her country of nationality because of persecution or a well-founded fear of persecution. An asylee is a person who meets the definition of refugee and is already present in the United States or is seeking admission at a port of entry. Refugees are required to apply for LPR ("green card") status one year after being admitted, and asylees may apply for green card status one year after their grant of asylum.

Nonimmigrants are foreign nationals granted temporary entry into the United States. The major activities for which nonimmigrant admission is authorized include temporary visits for business or pleasure, academic or vocational study, temporary employment, and to act as a representative of a foreign government or international organization. DHS collects information on the characteristics of a proportion of nonimmigrant admissions, those recorded on the I-94/I-94W arrival and departure records.

U.S. immigration law gives preferential immigration status to persons with a close family relationship with a U.S. citizen or legal permanent resident, persons with needed job skills, persons who qualify as refugees or asylees, and persons who are from countries with relatively low levels of immigration to the United States (diversity immigrants). Immigration to the United States can be divided into two general categories: (1) classes of admission subject to the annual worldwide limitation and (2) classes of admission exempt from worldwide limitations. Numerical limits are imposed on visas issued and not on admissions. In 2019, the annual limit for family-sponsored preferences was 226,000 and the limit for employment-based preferences was 140,000 plus any unused visas in the family-sponsored preference classes from the previous year, of which there were 1,918 from 2018.

The Diversity Visa Program is available to nationals of countries with fewer than 50,000 persons granted LPR status during the preceding five years in the employment-based and family-sponsored preferences and immediate relative classes of admission. The annual diversity visa limit has been 50,000 since 1999.

The number of persons who may be admitted to the United States as refugees each year is established by the President in consultation with Congress. The ceiling was set at 30,000 in 2019. There is no numerical limit on the number of persons who can be granted asylum status in a year.

Classes of admission exempt from the worldwide limitation include immediate relatives of U.S. citizens, refugees and asylees adjusting to permanent residence, and other various classes of special immigrants.

Metropolitan and micropolitan areas—Metropolitan and micropolitan statistical areas (metro and micro areas) are geographic entities delineated by the U.S. Office of Management and Budget (OMB) for use by Federal statistical agencies in collecting, tabulating, and publishing Federal statistics. These areas are the result of the application of published standards to Census Bureau data. Generally, the areas are delineated using the most recent set of standards following each decennial census. Between censuses, the delineations are updated annually to reflect the most recent Census Bureau population estimates. Areas based on the 2010 standards and Census Bureau data were last delineated in March 2020.

The term "Core Based Statistical Area" (CBSA) is a collective term for both metro and micro areas. A metro area contains a core urban area of 50,000 or more population, and a micro area contains an urban core of at least 10,000 (but less than 50,000) population. Each metro or micro area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration (as measured by commuting to work) with the urban core.

Urban and rural—The Census Bureau's urban-rural classification is fundamentally a delineation of geographical areas, identifying both individual urban areas and the rural areas of the nation. The Census Bureau's urban areas represent densely developed territory, and encompass residential, commercial, and other non-residential urban land uses.

For the 2010 Census, an urban area comprises a densely settled core of census tracts and/or census blocks that meet minimum population density requirements, along with adjacent territory containing non-residential urban land uses as well as territory with low population density included to link outlying densely settled territory with the densely settled core. To qualify as an urban area, the territory identified according to criteria must encompass at least 2,500 people, at least 1,500 of which reside outside institutional group quarters. The Census Bureau identifies two types of urban areas: Urbanized Areas of 50,000 or more people; and Urban Clusters of at least 2,500 and less than 50,000 people. "Rural" encompasses all population, housing, and territory not included within an urban area. For Census 2010, many more geographic entities, including metropolitan areas, counties, and places, contain both urban and rural territory, population, and housing units.

Residence—In determining residence, the Census Bureau counts each person as an inhabitant of a usual place of residence (i.e., the place where one lives and sleeps most of the time). While this place is not necessarily a person's legal residence or voting residence, the use of these different bases of classification would produce the same results in the vast majority of cases.

Race—Census 2000 and 2010 adhere to the federal standards for collecting and presenting data on race and ethnicity as established by the OMB in October 1997. Starting with Census 2000, the OMB requires federal agencies to use a minimum of five race

categories: White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. Additionally, to collect data on individuals of mixed race parentage, respondents were allowed to select one or more races. For respondents who did not identify with any of these five race categories, the OMB approved and included a sixth category—"Some other race" on the Census 2000 and 2010 questionnaire. The Census 2000 and 2010 question on race included 15 separate response categories and three areas where respondents could write in a more specific race group. The response categories and write-in answers can be combined to create the five minimum OMB race categories plus "Some other race." People who responded to the question on race by indicating only one race are referred to as the *race alone* population, or the group that reported only one race category. Six categories make up this population: White alone, Black or African American alone, American Indian and Alaska Native alone, Asian alone, Native Hawaiian and Other Pacific Islander alone, and Some other race alone. Individuals who chose more than one of the six race categories are referred to as the *Two or More Races* population, or as the group that reported more than one race. Additionally, respondents who reported one race together with those who reported the same race plus one or more other races are combined to create the *race alone or in combination* categories. For example, the *White alone or in combination group* consists of those respondents who reported only White or who reported White combined with one or more other race groups, such as "White and Black or African American," or "White and Asian and American Indian and Alaska Native." Another way to think of the group who reported White alone or in combination is as the total number of people who identified entirely or partially as White. This group is also described as people who reported White, whether or not they reported any other race.

The *alone or in combination* categories are tallies of *responses* rather than *respondents*. That is, the alone or in combination categories are not mutually exclusive. Individuals who reported two races were counted in two separate and distinct alone or in combination race categories, while those who reported three races were counted in three categories, and so on. Consequently, the sum of all alone or in combination categories equals the number of races reported, which exceeds the total population.

The racial categories included in the census questionnaire generally reflect a social definition of race recognized in this country and not an attempt to define race biologically, anthropologically, or genetically. It is also recognized that the categories of the race item include racial and national origin or sociocultural groups. For example, data are available for the American Indian and Alaska Native tribes. A detailed explanation of race can be found at <www.census.gov/prod/cen2010/doc/sf1.pdf>.

In the CPS and other household sample surveys conducted through personal interview, respondents are asked to classify their race as: (1) White; (2) Black or African American; (3) American Indian or Alaska Native; (4) Asian; or (5) Native Hawaiian or Other Pacific Islander. Beginning January 2003, respondents were allowed to report more than one race to indicate their mixed racial heritage.

Hispanic population—People who identify with the terms "Hispanic" or "Latino" are those who classify

themselves in one of the specific Hispanic or Latino categories listed on the decennial census questionnaire and various Census Bureau survey questionnaires – “Mexican, Mexican American, Chicano” or “Puerto Rican” or “Cuban” – as well as those who indicate that they are “another Hispanic, Latino, or Spanish origin.” Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s ancestors before their arrival in the United States.

Traditional and current data collection and classification treat race and Hispanic origin as two separate and distinct concepts in accordance with guidelines from the OMB. People who are Hispanic may be of any race and people in each race group may be either Hispanic or Not Hispanic. Also, each person has two attributes, their race (or races) and whether or not they are Hispanic. The overlap of race and Hispanic origin is the main comparability issue. For example, Black Hispanics (Hispanic Blacks) are included in both the number of Blacks and in the number of Hispanics. For further information, see <www.census.gov/topics/population/race/about.html>.

Foreign-born and native populations—The Census Bureau separates the U.S. resident population into two groups based on whether or not a person was a U.S. citizen or U.S. national at the time of birth. Anyone born in the United States, Puerto Rico, or a U.S. Island Area (such as Guam), or born abroad to a U.S. citizen parent is a U.S. citizen at the time of birth and consequently included in the *native population*. The term *foreign-born population* refers to anyone who is not a U.S. citizen or a U.S. national at birth. This includes naturalized U.S. citizens, legal permanent resident aliens (immigrants), temporary migrants (such as foreign students), humanitarian migrants (such as refugees), and people illegally present in the United States. The Census Bureau provides a variety of demographic, social, economic, geographic, and housing information on the foreign-born population in the United States at <www.census.gov/topics/population/foreign-born.html>.

Mobility status—The U.S. population is classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the survey or census and the place of residence at a specified earlier date. Nonmovers are all persons who were living in the same house or apartment at the end of the period as at the beginning of the period. Movers are all persons who were living in a different house or apartment at the end of the period than at the beginning of the period. Movers are further classified as to whether they were living in the same or different county, state, or region, or were movers from abroad. Movers from abroad include all persons whose place of residence was outside the United States (including Puerto Rico, other U.S. Island Area, or a foreign country) at the beginning of the period.

Living arrangements—Living arrangements refer to residency in households or in group quarters. A “household” comprises all persons who occupy a

“housing unit,” that is, a house, an apartment or other group of rooms, or a single room that constitutes “separate living quarters.” A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, or employees who share the housing unit. A person living alone or a group of unrelated persons sharing the same housing unit is also counted as a household. See text, Section 20, Construction and Housing, for definition of housing unit.

All persons not living in housing units are classified as living in group quarters. These individuals may be institutionalized, e.g., under care or custody in juvenile facilities, jails, correctional centers, hospitals, or nursing homes; or they may be residents in noninstitutional group quarters such as college dormitories, group homes, or military barracks.

Householder—The householder is the person, or one of the people, in whose name the home is owned, being bought, or rented. If a home is owned or rented jointly by a married couple, either spouse may be listed first. Two types of householders are distinguished: a family householder and a nonfamily householder. A family householder is a householder living with one or more people related to him or her by birth, marriage, or adoption. The householder and all people in the household related to him or her are family members. A family household may contain people not related to the householder, but those people are not included as part of the householder’s family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families.

Nonfamily—A nonfamily householder is a householder living alone or with nonrelatives only.

Subfamily—A subfamily is a married couple with or without children, or a single parent with one or more own never-married children under 18 years old, who does not maintain their own household, but lives in the home of someone else (the householder). Subfamilies are divided into “related” and “unrelated” subfamilies. A related subfamily is related to, but does not include, the householder or the spouse of the householder. Members of a related subfamily are also members of the family with whom they live. The number of related subfamilies, therefore, is not included in the count of families. An unrelated subfamily may include persons such as guests, lodgers, or resident employees and their spouses and/or children; none of whom is related to the householder. The number of unrelated subfamily members is included in the total number of household members, but is not included in the count of family members.

Married couple—A married couple live together in the same household, with or without children and other relatives.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1. Population and Area: 1790 to 2020

[Area figures represent area on indicated date including in some cases considerable areas not then organized or settled, and not covered by the census. Area data include Alaska beginning in 1870 and Hawaii beginning in 1900. Total area figures for 1790 to 1970 have been recalculated on the basis of the remeasurement of states and counties for the 1980 census, but not on the basis of subsequent censuses. The land and water area figures for past censuses have not been adjusted and are not strictly comparable with the total area data for comparable dates because the land areas were derived from different base data, and these values are known to have changed with the construction of reservoirs, draining of lakes, etc. Density figures are based on land area measurements as reported in earlier censuses]

Census date	Resident population				Area (square miles)		
	Number	Per square mile of land area	Increase over preceding census		Total	Land	Water ¹

Table 3. Resident Population Projections and Components of Change: 2020 to 2060

[In thousands, except as indicated (332,639 represents 332,639,000). As of July 1. The 2017 National Projections are based on the July 1, 2016 population estimates, which are based on the 2010 Census. The projections were produced using a cohort-component method and are based on assumptions about future births, deaths, and net international migration. More information on methodology and assumptions is available at <www.census.gov/programs-surveys/popproj/technical-documentation/methodology.html>]

Year	Population			Components of change			
	Total	Numeric change	Percent change ¹	Natural increase	Births	Deaths	Net international migration ²
2020.....	332,639	2,370	0.7	1,360	4,112	2,752	1,010
2025.....	344,234	2,271	0.7	1,241	4,156	2,915	1,030
2030.....	355,101	2,093	0.6	1,028	4,162	3,134	1,064
2035.....	364,862	1,859	0.5	774	4,166	3,391	1,085
2040.....	373,528	1,657	0.5	558	4,196	3,638	1,098
2045.....	381,390	1,529	0.4	424	4,243	3,819	1,106

¹ Net increase as percent of population at beginning of period. ² Net international migration includes the international migration of both native and foreign-born populations. Specifically, it includes: (a) the net international migration of the foreign born, (b) the net migration between the United States and Puerto Rico, (c) the net migration of natives to and from the United States, and (d) the net movement of the Armed Forces population between the United States and overseas. ³ The April 1, 2010 population estimates base reflects changes from the Count Question Resolution program and geographic program revisions.

Source: U.S. Census Bureau, Population Division, National Population Totals: 2010-2020, "Population, population change, and estimated components of population change: April 1, 2010 to July 1, 2020 (NST-EST2020-alldata)," <www.census.gov/programs-surveys/popest/technical-documentation/research/evaluation-estimates/2020-evaluation-estimates.html>, accessed June 2021.

Table 6. Resident Population by Sex, Race, and Hispanic Origin: 2000 to 2020

[281,425 represents 281,425,000. Data shown are modified race counts; see text, this section. Estimates for 2010-2020 are based on the 2010 Census and were created without incorporation or consideration of the 2020 Census results]

Intercensal Estimates of the Resident Population by Sex, Race, and Hispanic Origin for the United States: April 1, 2000 to July 1, 2010 (US-EST00INT-02)," September 2011; and National Population by Characteristics: 2010-2020, Datasets, "Monthly National Population Estimates by Age, Sex, Race, Hispanic Origin, and Population Universe for the United States: April 1, 2010 to December 1, 2020," <www.census.gov/programs-surveys/popest/technical-documentation/research/evaluation-estimates/2020-evaluation-estimates.html>, accessed June 2021.

8 **Table 7. Resident Population Projections by Sex and Age: 2020 to 2060**

[In thousands, except as indicated (332,639 represents 332,639,000). As of July 1. The 2017 National Projections are based on the July 1, 2016 population estimates, which are based on the 2010 Census. The projections were produced using a cohort-component method and are based on assumptions about future births, deaths, and net international migration. More information on methodology and assumptions is available at <www.census.gov/programs-surveys/popproj/technical-documentation/methodology.html>]

¹ In combination with one or more other races. The sum of the five race groups adds to more than the total population because individuals may report more than one race. The original race data from Census 2010 are modified to eliminate the "some other race" category. ² Persons of Hispanic origin may be of any race.

X Not applicable. ¹ Total population change includes a residual. This residual represents the change in population that cannot be attributed to any specific demographic component. ² Net international migration includes the international migration of both native and foreign-born populations. Specifically, it includes: (a) the net international migration of the foreign born, (b) the net migration between the United States and Puerto Rico, (c) the net migration of natives to and from the United States, and (d) the net movement of the Armed Forces population between the United States and overseas.

¹ The age dependency ratio is derived by dividing the sum of populations age under 18 and age 65 and over by the population age 18-64, and multiplying by 100. ² The child dependency ratio is derived by dividing the population under age 18 by the population age 18-64, and multiplying by 100. ³ The old-age dependency ratio is derived by dividing the population age 65 and over by the population age 18-64, and multiplying by 100.

Table 21. Large Metropolitan Statistical Areas—Population: 2010 to 2020

[2010 as of April 1. Covers metropolitan statistical areas with population of 250,000 and over in 2020, as delineated by the U.S. Office of Management and Budget as of March 2020. All geographic boundaries for 2010 to 2020 population estimates are defined as of January 1, 2020. Estimates are based on the 2010 Census and were created without incorporation or consideration of the 2020 Census results. For definitions and components of all metropolitan and micropolitan areas, see Appendix II. Minus sign (-) indicates decrease]

Table 22. The 50 Largest Metropolitan Statistical Areas in 2020—Components of Population Change: 2010 to 2020

[Covers period April 1, 2010 to July 1, 2020. Change is derived from April 1, 2010 estimates base which reflects changes to the Census 2010 population from the Count Question Resolution program and geographic program revisions. Covers metropolitan statistical areas (MSAs) as delineated by the U.S. Office of Management and Budget as of March 2020. Top 50 MSAs ranked by July 2020 population. Estimates are based on the 2010 Census and were created without incorporation or consideration of the 2020 Census results. For definitions and components of all metropolitan and micropolitan areas, see Appendix II. Minus sign (-) indicates decrease]

Table 24. Population of Incorporated Places With 175,000 or More Inhabitants in 2020: 1990 to 2020

[In thousands, except as indicated (223 represents 223,000). Census years as of April 1; all other years, as of July 1. Data for 2010-2020 are based on the 2010 Census and were created without incorporation or consideration of the 2020 Census results. All geographic boundaries for the 2020 population estimates series are defined as of January 1, 2020. For 1990 and 2000, the counts relate to places as defined on January 1, 2010. Minus sign (-) indicates decrease. See Appendix III]

Table 27. Population in Coastal Watershed Counties: 1970 to 2019

[3,537 represents 3,537,000. Data for 1960 to 2010 as of April 1; 2019 data as of July 1. Data for 1960 through 2000 are based on 675 counties in areas as defined by U.S. National Oceanic and Atmospheric Administration, 1992. Beginning 2010, data cover 678 counties and equivalent areas in a coastal watershed. See Appendix III]

Table 28. Geographic Mobility Status of the Population by Selected Characteristics: 1950 to 2020

[Numbers in thousands (148,400 represents 148,400,000). For persons 1 year old and over. Based on comparison of place of residence in year of survey vs. 1 year earlier. Movers are all people who were living in a different home at the end of the period rather than at the beginning. Excludes members of the Armed Forces except those living off post or with their families on post. Movers from Puerto Rico and the United States Island Areas are counted as movers from abroad. Based on Current Population Survey, Annual Social and Economic Supplement. See text, this section and Appendix III]

¹ Population controls consistent with 2000 Census. ² The migration question wording changed in 2004. Before 2004, it asked about Residence on March 1 of the previous year. As of 2004, it asked about residence one year ago. See <www.census.gov/topics/population/migration/guidance/user-notes.html> for more information. ³ Caution should be used when comparing numbers/rates of movers within the same county and from a different county between the 1999-2000 to 2004-2005 period with other periods. For more information see <www.census.gov/topics/population/migration/guidance/impact-of-processing-on-cps-interstate-migration-rates.html>. ⁴ Population controls consistent with 2010 Census. ⁵ The source of 2014 data for this table is the CPS ASEC sample of 98,000 addresses. The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. For more information, see <www.census.gov/topics/population/migration/guidance/user-notes.html>.

Table 38. Native and Foreign-Born Population by State: 2019

[283,307 represents 283,307,000. The term foreign-born refers to anyone who is not a U.S. citizen at birth. This includes naturalized U.S. citizens, legal permanent residents (immigrants), temporary migrants (such as foreign students), humanitarian migrants (such as refugees), and persons illegally present in the United States. The American Community Survey universe includes the household population and the population living in institutions, college dormitories, and other group quarters. Based on a sample and subject to sampling variability; see text, this section and Appendix III]

Table 40. Native and Foreign-Born Populations by Selected Characteristics: 2019

[In thousands (324,356 represents 324,356,000). As of March. The foreign-born population includes anyone who is not a U.S. citizen at birth. This includes legal permanent residents (immigrants), temporary migrants (such as foreign students), humanitarian migrants (such as refugees), and persons illegally present in the United States. Based on Current Population Survey, Annual Social and Economic Supplement, which includes the civilian noninstitutional population plus Armed Forces living in housing units on or off post with at least one other civilian adult; see text, this section, and Appendix III]

Characteristic	Total population	Native population	Foreign-born population			
			Total	Naturalized citizen	Not a U.S. citizen	Year of entry: 2010 or later
Total	324,356	278,536	45,820	22,296	23,524	11,619

¹ The numbers by American Indian and Alaska Native tribal grouping do not add to the total American Indian and Alaska Native population. This is because the American Indian and Alaska Native tribal groupings are tallies of the number of American Indian and Alaska Native responses rather than the number of American Indian or Alaska Native respondents. Respondents reporting several American Indian or Alaska Native groups are counted several times. ² Includes other tribal groupings not shown separately.

Source: U.S. Census Bureau, 2010 Census Briefs, *The American Indian and Alaska Native Population: 2010*, January 2012. See also <www.census.gov/about/partners/cic/resources/data-links/aian.html>.

Table 45. Refugee Arrivals and Individuals Granted Asylum by Country of Nationality: 2010 to 2019

[For year ending September 30. Ranked by 2019 country of nationality. Data shown provide information on the number of persons admitted to the U.S. as refugees or granted asylum in the United States in the year shown. In cases with no country of nationality, the applicant's last country of residence is assigned. For definitions of refugee and asylee, see text, this section. Refugee data were derived from data on refugee admissions that are maintained in the Worldwide Refugee Admissions Processing System (WRAPS) of the Bureau of Population, Refugees, and Migration (PRM) of the U.S. Department of State. Asylee data were derived from data obtained from Global, a cloud-based platform of the U.S. Citizenship and Immigration Services (USCIS) of the U.S. Department of Homeland Security that replaced the Refugee, Asylum, and Parole System (RAPS), and also data obtained from the Executive Office for Immigration Review (EOIR) of the U.S. Department of Justice]

Table 49. Estimated Unauthorized Immigrants by Selected Country of Birth and State of Residence: 2000 to 2018

[In thousands (8,460 represents 8,460,000). As of January. The unauthorized resident immigrant population is defined as all foreign-born non-citizens who are not legal U.S. residents; most entered the U.S. without inspection or were admitted temporarily and stayed past the date they were required to leave. Unauthorized immigrants applying for adjustment to legal permanent resident status under the Immigration and Nationality Act are unauthorized until they have been granted lawful permanent residence, though they may have been authorized to work. These estimates were calculated using a "residual method," whereby estimates of the legally resident foreign-born population were subtracted from the total foreign-born population. All of these component populations were resident in the United States on January 1 and entered during the period from 1980 to the year prior to the year shown. Persons who entered the U.S. prior to 1980 were assumed to be legally resident. Estimates of the legally resident foreign-born population were based primarily on administrative data of the Department of Homeland Security, while estimates of the total foreign-born population were obtained from the American Community Survey of the U.S. Census Bureau]

Table 54. Population by Selected Ancestry Group and Region: 2019

[In thousands (328,240 represents 328,240,000), except percent. Covers single and multiple ancestries; includes all people who reported each ancestry. Ancestry refers to a person's ethnic origin, heritage, descent, or "roots," which may reflect their place of birth or that of previous generations of their family. The American Community Survey universe includes the household population and the population living in institutions, college dormitories, and other group quarters. Based on a sample and subject to sampling variability; see text, this section]

¹ Includes persons of other races not shown separately. ² Includes persons who are married with spouse present, married with spouse absent, and separated. Beginning 2019, estimates for married individuals include same-sex married couples. ³ Beginning 2003, data represent persons who selected this race group only and exclude persons reporting more than one race. Prior to 2003, the CPS allowed respondents to report only one race group. See also comments on race in the text for this section. ⁴ Hispanic persons may be of any race.

NA Not available. ¹ Includes only adults who are married, spouse present in the household. This living arrangement supersedes the others shown in the table. For example, people living with their parents and a spouse are counted as living with a spouse, not as a child of the householder. ² Children of the householder are not living with a spouse or unmarried partner, and are residing in the household of a parent. In CPS, unmarried college students living in dormitories are counted as living in the parental home. ³ Includes children of the householder who are not living with a spouse or unmarried partner, and are residing in the household of a parent.

B Base less than 75,000. NA Not available. X Not applicable. ¹ Beginning with the 2003 CPS, respondents could choose more than one race. Beginning in 2003, data represent persons who selected this race group only and exclude persons reporting more than one race. The CPS in prior years allowed respondents to report only one race group. See also comments on race in text for this section. ² Persons of Hispanic origin may be of any race. ³ No spouse present. ⁴ A subfamily is a married couple or parent/child group that does not maintain its own household. A subfamily may be related to the householder, or unrelated to the householder.

NA Not available. ¹ Includes other race/ethnicities, not shown separately. ² Beginning 2007, includes children living with married and unmarried parents. ³ Beginning with the 2003 Current Population Survey (CPS), respondents could choose more than one race. Beginning 2003, data represent persons who selected this race group only and exclude persons reporting more than one race. The CPS prior to 2003 allowed respondents to report only one race group. ⁴ Hispanic persons may be of any race.

Table 67. Parents and Children in Stay-At-Home Parent Family Groups: 1995 to 2020

[In thousands (22,973 represents 22,973,000), except percent. Family groups with children include those families that maintain their own household (family households with own children); those that live in the home of a relative (related subfamilies); and those that live in the home of a nonrelative (unrelated subfamilies). Stay-at-home family groups are opposite-sex married-couple family groups with children under age 15 where one parent is in the labor force all of the previous year and the other parent is out of the labor force for the entire year with the reason 'taking care of home and family.' Only opposite-sex married couples with children under age 15 are included. Based on Current Population Survey; see Appendix III]
